## Junior full-stack developer

+32 48 830 5152 | [berlwbr@gmail.com](mailto:berlwbr@gmail.com) | Antwerp, Belgium - open to remote US roles | [GitHub](#) |

I am a full-stack web developer with a back-end focus, trained through self-study and an intensive program at General Assembly.

I build applications using JavaScript, React, Node/Express, Python/Django, and SQL/NoSQL databases.

I'm particularly drawn to complex logic and debugging, and I focus on developing the skills to build clear, reliable systems with attention to detail.

My projects include a tutoring management system actively being used in a Yeshiva and a collaborative full-stack project developed in a 3-person team.

## SKILLS

**Technical:** JavaScript, React, Node/Express, Python/Django, PostgreSQL, MongoDB, Git, MVC/Auth.

**Strengths:** Analytical Problem Solving, Research, and Detail-Oriented Communication.

**Languages:** Yiddish, English, Hebrew.

## EXPERIENCE

### Software Engineering Bootcamp (SEB), General Assembly - Dec. 1 - March 6, 2026

Intensive full-time online program in full-stack web development (JavaScript, React, Node.js, Python/Django, databases), delivered via Zoom and Slack with daily standups, lectures, hands-on labs (guided coding practice), homework, and four deployed projects listed below:

#### Project 4 - [TutorTrack](#) / [מלמד פרטי](#) - [Readme](#) - Django, Python, PostgreSQL - 1 week MVP + iterative expansion, Solo

Built a full-stack tutoring management application with CRUD workflows, authentication/authorization, dashboards, session/monthly billing logic, reporting, and role-based views for managers and tutors. Expanded through iterative feature and UI improvements.

#### Project 3 [Reflectly](#) - [Readme FE](#) - [Readme BE](#) - MERN stack - 1 Week, Group of 3

Built a full-stack mood-tracking/community application with full CRUD functionality. My responsibilities included core back-end, authentication/authorization from the Model all the way to the view, and testing and debugging across all parts.

#### Project 2 [Code-Blueprint](#) - [Readme](#) - Node/Express, MongoDB, EJS - 1 Week, Solo

Built a project-planning application for organizing user stories, routes, ERD's, and pseudocode, with authentication and full CRUD functionality.

#### Project 1 [Snake game](#) - [Readme](#) - JavaScript, HTML, CSS - 1 Week, Solo

Built browser-based game emphasizing JavaScript logic, DOM manipulation, and event handling.

## EDUCATION

Software Engineering Bootcamp - General Assembly - Certificate of Completion - DEC. 2025 - MARCH 2026
